

SyncPager (1.1)

Alerts the Synchronet system operator that someone wants to talk to them.

Official support sites: [Official Github Repo](#) - [Official Forum](#) or mail to marisag@synchronetbbs.org

- i. Install audacious on the client/local-side:

```
apt-get install audacious
```

- ii. Use CPAN to install the following Perl modules:

```
Email::Simple  
Email::Simple::Creator  
Email::Sender::Simple  
LWP::Simple
```

- iii. On the BBS server copy **syncnotify** to **/sbbs/exec** - follow instructions on adding main script in scfg when sysop is being paged

```
scfg->Chat Features->External Sysop Chat Pagers  
  
Command Line "/sbbs/exec/syncnotify %# %a"  
Intercept: no  
Native: Yes  
Shell: Yes
```

- iv. On the BBS server copy **clearpager** to **/sbbs/exec** - follow instructions about adding this as

logout script in scfg

```
scfg->External Programs->Fixed Events->Logout Event  
Command Line "clearpager %#"
```

- v. On the BBS server copy **ackpager** to **/sbbs/exec** - follow instructions on adding sysop command

```
scfg->External Programs->Online Program Sections->Main->Main Program Section  
Command Line "/sbbs/exec/ackpager"  
Make sure you set the access level to 90
```

Edit the **config.ini** file on your local computer. Should be self explanatory. Most important is the **CheckURL** entry that should be like the default but for your BBS server.

Then all you need to do is run the SyncPager script and let it run and you will be notified when someone tries to chat with you...
